

# GLORIOUS VNL-500 USB

In macOS 10.14 Mojave, Apple introduced new security settings that allow you to control what apps can access your camera and microphone. Previous macOS versions allowed you to control only access to your location, contacts, photos, calendar, and reminders.

The first time the application will try to get access to your microphone, you'll see a prompt from your system:

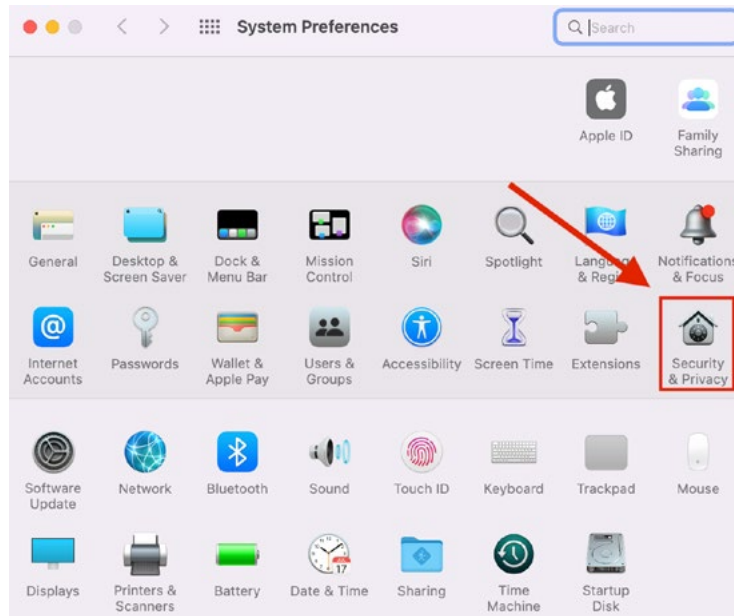

**Note:**

**You won't receive notifications from Apple apps like Safari or FaceTime. You can limit access to your microphone only for third-party programs.**

Follow these steps to allow the apps to access your microphone:

1. On your Mac, choose Apple menu > System Preferences.
2. Click Security & Privacy.

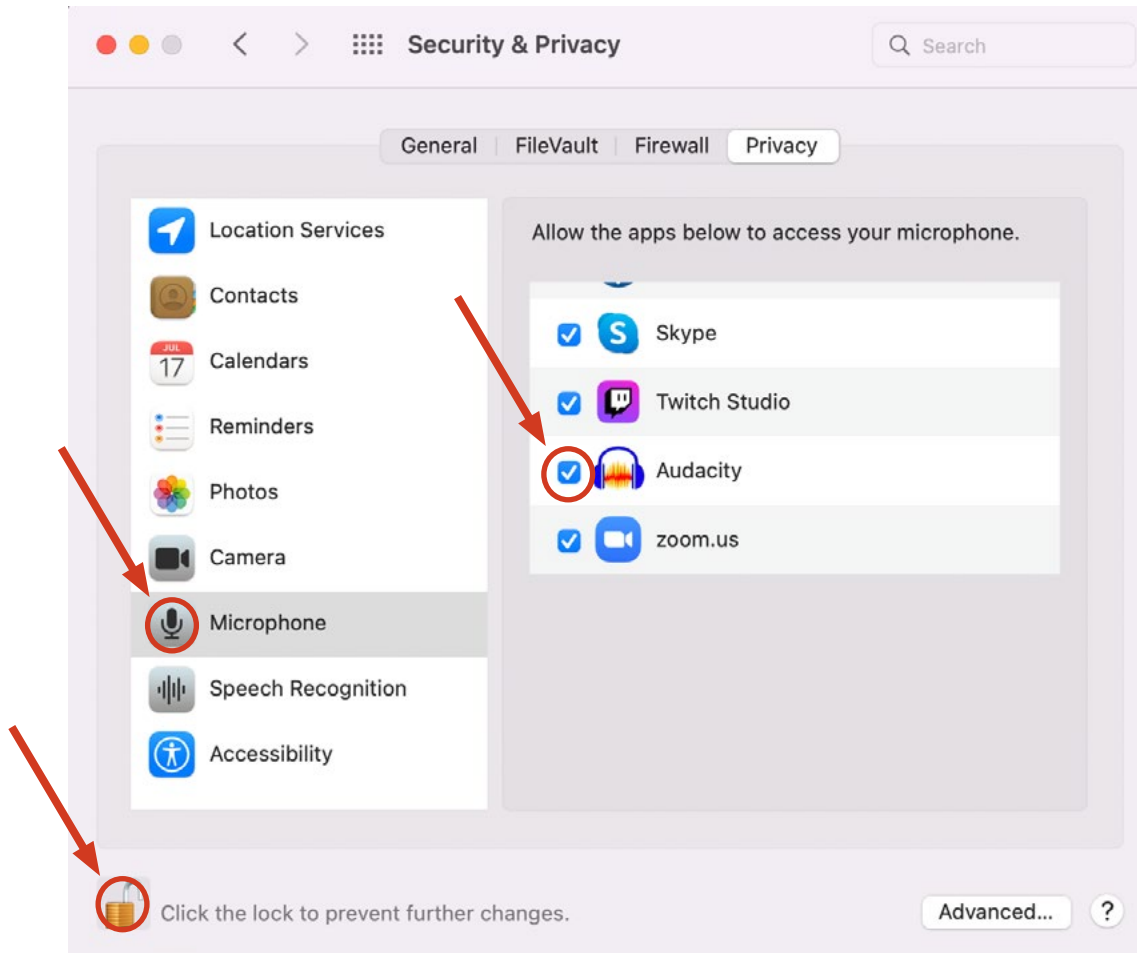

3. Choose the Privacy tab.
4. Select Microphone.

# GLORIOUS VNL-500 USB

5. Check the box next to the app to allow it to access your microphone.

**Please note that if you allow the apps to use your microphone, any information they receive and collect is governed by their privacy policy. We recommend you learn it to make sure that your personal data will be secure.**
